

PRESSWOOD® PALLETS

making the world more palletable

Space Saving
ISPM15 Approved
Choice of Sizes
Re-usable
Recycled Product
Free FLT Access
Solid Top Deck
No Nails or Screws
Rounded Edges
Lighter than Wood

Low Moisture

Weather resistant

No 2nd Hand Value

Ideal for POS/POP

Price Competitive

The Asian Long-horned beetle is just one of the many plant pests & diseases that pose a global threat to flora & fauna. Therefore, ISPM15 (International Standards for Phytosanitary Measures No. 15) has been developed to combat the movement of infestations, via wood pallets & packaging, around the world.

Because Presswood® Pallets are moulded under enormous pressure and at such a high temperature, they need no extra treatment and are regarded as outside of these regulations. This means that no extra stock is needed as Presswood® Pallets can be exported freely to any worldwide destination.

Even if you are not exporting, there are still many benefits to help improve your palletisation system. The nesting feature will save a vast amount of space and make it easier and safer to move stacks of empty pallets. The rounded corners and edges of the Presswood® Pallet will result in faster shrink or stretch wrapping with improved performance and resulting in less tears.

The proven moulded design also offers a solid top deck for ultimate protection of your products; it eliminates danger from injury or damage as there are no nails or screws; and contains less moisture than even kiln dried pallets.

We offer more sizes than ever, smaller 'display' styles for Point-of Sale or compact products, ISO sizes for improved container loading, and the more common Euro and UK sizes for regular work.

So, wherever in the world you are sending your goods, go for the bug-free option of a Presswood® Pallet, it makes it all very palletable.
